

SciCOFish

SCIENTIFIC SUPPORT FOR THE MANAGEMENT OF COASTAL AND
OCEANIC FISHERIES IN THE PACIFIC ISLANDS REGION

First Steering Committee meeting report

Noumea, 28 February 2011

This project is funded by

This project is implemented by

The representatives of the P-ACP countries and a representative from Timor-Leste met on 28 February 2011 at the SPC Conference Center in Noumea, to hold the first Steering Committee of the EU-funded SciCOFish project.

The project Steering Committee was made of:

P-ACP representatives	
1. Koroa Raumea	Cook Islands
2. Valentin A. Martin	Federated States of Micronesia
3. Sanaila Naqali	Fiji
4. Beero Tioti	Kiribati
5. Monte Depaune	Nauru
6. James Tafatu	Niue
7. Leban Gisawa	Papua New Guinea
8. Atonio P. Mulipola	Samoa
9. Joao Xavier Amaral	Timor-Leste
10. Sione Vailala Matoto	Tonga
11. Samasoni Finikaso	Tuvalu
12. Moses Amos	Vanuatu
Other members	
13. Jerry Huekwahin	Representative of the Regional Authorizing Officer, P.I.F.S
14. Mike Batty	Project supervisor
15. Anne Lefevre	Project administrator

The following observers involved in the project attended:

16. Benjamin Vives	Representative of the Head of Delegation of the EC for the Pacific
17. Lindsay Chapman	SPC Coastal Fisheries Programme Manager
18. John Hampton	SPC Oceanic Fisheries Programme Manager
SciCOFish staff	
19. Being Yeeting	Fisheries Scientist (finfish)
20. Kalo Pakoa	Fisheries Scientist (invertebrates)
21. Franck Magron	Reef Fisheries Information Manager
22. Ashley Williams	Fisheries Scientist (national scientific support)
23. Jesus Jurado Molina	Fisheries Scientist (ecosystem modelling)
24. Bruno Deprez	Fisheries Data Audit Officer
25. Peter Sharples	Observer support and development Coordinator
26. Siosifa Fukofuka	Observer training and support Officer

Other SPC and FFA members, regional organizations, and SPC staff also attended, as observers.

The participants had been provided with background documents: a brief SciCOFish project description, the “SciCOFish 2010 work plan and cost estimate” and the “Year 1 progress report and year 2 work plan”.

Brief on project design and status

After the Fiji delegate opened the Steering Committee with a prayer, Mike Batty, Director of the Fisheries, Aquaculture and Marine Ecosystem Division and SciCOFish project supervisor, commenced the meeting with a presentation on the support of European Union for the Pacific region, particularly through the 3 actual projects concerning SPC FAME Division work: SciCOFish, DevFish2 and Scifish.

He explained that the purpose of the steering committee is to give the P-ACP representatives and other steering committee members an overview of the SciCOFish Project and its expected results, to advise them on the 2010 activities and to receive guidance from countries to identify the priorities for 2011 (year 2 of the project) work programme.

SciCOFish coastal fisheries component – Component 2

After the confirmation of Mike Batty as Chairman, Lindsay Chapman, Coastal Fisheries Programme Manager, presented the 2010 activities of the SciCOFish project's component 2 and the planned activities for 2011. The objective of component 2 is that P-ACP governments, private sector and communities are equipped to monitor coastal fisheries, to provide scientific advice in support of sustainable management of these resources.

All participants welcomed the evolution of the SciCOFish work to national capacity building, allowing national staff to undertake surveys and analyses themselves. The countries that benefited from capacity building on invertebrates, finfish or aquarium fisheries assessment in 2010 confirmed the high value of this kind of technical assistance.

Requests for future assistance to be included in work plans have been submitted and could be summarised as:

➤ **Request 1:** assistance on invertebrates' assessment, especially for sea cucumbers, leading to management advice has been sought particularly by Vanuatu, Tuvalu, Nauru, Samoa and Cook Islands.

➤ **Request 2:** representatives expressed interest for capacity building on aquarium fisheries management (Vanuatu, Tuvalu, PNG and Tonga) and finfish (Nauru, Samoa and Cook Islands).

Concerning these 2 requests, it has been decided that SPC staff and representatives should meet during the week to identify exact country needs and to plan the schedule for future work plans, as the SPC Coastal Fisheries Programme can only assist 3 or 4 countries per year on each technical issue (finfish, invertebrates and aquarium fish).

➤ **Request 3:** representatives expressed interest for assistance on databases management and export data (FSM and Kiribati)- on fish aquarium trade (PNG) and -catch and effort (PNG).

➤ **Request 4:** various countries asked if it was possible to provide assistance and advice with socio-economic assessment (Samoa and Nauru).

➤ **Request 5:** Kiribati, Niue, Timor-Leste and Nauru are interested in the implementation of scholarships and training to balance the possible lack of technical knowledge in countries. This is an activity that was not initially planned under the SciCOFish project and CFP will think about how to accommodate this request.

➤ **Request 6:** Vanuatu asked if assistance on reviewing national policies and legislation could be provided under the SciCOFish project. This could not be provided under the SciCOFish project, but could be provided through other CFP activities.

➤ **Request 7:** assistance on capacity building was sought on stock assessment and data analysis for deep water snapper (Vanuatu and Samoa).

➤ **Request 8:** The results of the gender analysis were welcomed and the representatives expressed their interest in implementing the recommendations of the study, as a cross-cutting issue of the SciCOFish project. SPC proposed it would implement of these recommendations through the 2011 work plan and work plans for future years.

There were a range of other requests covering export of tuna and capacity building in this area: fish aggregation device (FAD) assistance, assistance to the private sector for tuna fisheries, and tools for monitoring control and surveillance issues. It was suggested that most of these activities could be picked up under the Devfish2 project.

SciCOFish oceanic fisheries component – Component 1

“Pacific ACP governments, the FFA and the WCPFC will be provided with scientific data, modeling and advice on oceanic fisheries to underpin their management decision making and strategic positioning” is the expected result of the SciCOFish component 1. John Hampton, Oceanic Fisheries Programme Manager, presented the logframe and indicators related to this result of the SciCOFish component 1 and achievements of the 2010 work plan and expected achievements of the draft 2011 plan.

Niue and Tuvalu thanked the OFP for the utility of TUFMAN software, noting its use in generating information reports for Ministers. Vanuatu also noted the positive capacity building they benefited from on stock assessment, and FSM stressed the good collaboration with SPC for observer data entry at national level.

All representatives had questions and comments that will help refine the 2011 work plan.

➤ **Request 9:** technical assistance for observer training was sought (Vanuatu, Tuvalu, FSM and Timor-Leste). OFP will respond to these requests and additional training will now also focus on longline fishing to take into account the requirements to increase observer coverage of longline vessels. Countries also supported the approach of training observer trainers.

➤ **Request 10:** interest was confirmed on recording of by-catch and discards (Niue), which is a key indicator of the SciCOFish project, and is related also to the observer program in that it is the only way to collect data on by-catch and discards.

➤ **Request 11:** Timor-Leste expressed its national needs on advice for the finalization of a Fisheries management plan and on capacity building for the use of OFP software (TUFMAN) for tuna fisheries management.

➤ **Request 12:** countries (Cook Islands and Tuvalu) are particularly interested in ecosystem modeling and climate change and wish to see SEAPODYM applied to this issue as soon as possible.

➤ **Request 13:** update of National Tuna Fisheries Status Report has been requested (Niue) and the new concept of OFP concerning these reports should answer this need.

➤ **Request 14:** Niue asked for advice on skipjack range contraction.

➤ **Request 15:** it was asked if, in terms of capacity building, OFP could propose formal qualifications as well as attachments (Samoa).

- **Request 16:** Vanuatu wishes to see data management systems for artisanal tuna fishing.
- **Request 17:** American Samoa, as observer, asked for assistance on stock assessment and it was confirmed they could benefit indirectly from the project.

SciCOFish Steering Committee conclusion

The SciCOFish Steering Committee approved the 2011 Work Programme, subject to the above suggestions that will be incorporated as far as the budget allows. It was agreed that the requests from the countries could also be included in the next years work plans and that representatives would meet SPC specialists during the following week to specify their needs and plan the activities.

After about 3 hours of presentations and discussions the SciCOFish Steering Committee meeting was declared closed.

ANNEX 1: description of activities 2010

Performance and success indicators Target 2014	Planned activities for 2010	Progress /issues	Action required for 2011
<p>Overall objective: conservation and sustainable use of coastal and oceanic fisheries resources in the Pacific Islands region</p> <ul style="list-style-type: none"> • Effort on yellowfin and bigeye tuna reduced to at least the level required to reach Fmsy (the fishing mortality associate with the maximum sustainable yield) or lower, for both species • Tuna discards by purse seiners reduced to less than 1% of catch (<12,000 t) confirmed by 100% observer coverage • At least some management measures adopted in each of 5 coastal areas with measurable signs of recovery observed in baseline monitoring (indicators to be established under this project) 		<ul style="list-style-type: none"> • Yellowfin tuna in the overall WCPFC area is currently estimated to be fished at levels less than MSY. However, there are concerns that exploitation rates may be too high in the equatorial zone, where most of the catch is taken. For bigeye tuna, fishing mortality continues to exceed MSY levels by approximately 50%, and reductions have been recommended on the basis of the assessment. New yellowfin and bigeye assessments will be undertaken by SPC in 2011. • Observer coverage for 2010 is believed to be close to 100%; however, data flows to SPC and data processing have been slowed by lack of resources both in-country and at SPC. This has largely been rectified by the 2011 WCPFC budget and rapid data assimilation in 2011 is expected. Estimates of by-catch and discards will be produced for SC7 in August 2011. • Baseline data being collected in Tonga for trochus and beche-de-mer 	

Performance and success indicators Target 2014	Planned activities for 2010	Progress /issues	Action required for 2011
<p>Project purpose: to provide a reliable and improved scientific basis for management advice and decision making in oceanic and coastal fisheries</p> <ul style="list-style-type: none"> • 100% of project stock assessment results for 4 main tuna species accepted by WCPFC Scientific Committee and forwarded to full Commission for decision-making • Observer coverage rates reach regionally-agreed levels by 2012 (100% for purse seine vessels) with no decrease in data quality • At least 5 P-ACP countries adopt coastal fisheries management measures in line with project recommendations 		<ul style="list-style-type: none"> • Skipjack and bigeye stock assessments presented in 2010 were accepted by SC6 and subsequently by the WCPFC. A peer review of the 2009 yellowfin assessment found that assessment to be at the leading edge of international best practice. • Purse seine observer coverage (as indicated by data received at SPC) in 2009 is currently 13.4%, similar to previous years. This is likely to further increase as data back logs are cleared, and will of course increase greatly in 2010 when the 100% coverage became a full-time measure. • Working with both Tonga (inverts) and Pohnpei, FSM (finfish) on management advice 	
<p>Result 1: P-ACP governments, the FFA and the WCPFC are provided with scientific data, modeling, and advice to underpin their management decision making and strategic positioning</p>			
<p>1.1. Observer training</p>			
<p>300 observers trained, 10 observer trainers and 10 observer debriefers operational</p>	<ul style="list-style-type: none"> • Observer training in FSM and observer debriefer training provided to several north Pacific ACPs • Observer coordinators workshop (ROCW) 	<ul style="list-style-type: none"> • Basic observer course for all gears in FSM (11/10 to 12/11) for FSM; Marshall Islands, Mauru and Palau: 14 observers and 2 observer trainers trained • Assistance for basic observer course for all gears in PNG (1/11 to 26/11) • “Mini” ROCW in Cairns (22-24/07) • Footage for production of training tool, a 	<ul style="list-style-type: none"> • Continuation of observer training for all P-ACP countries • Continuation of trainers’ training • Continuation of debriefers’ training • Organisation of ROCW • Production of training tools

Performance and success indicators Target 2014	Planned activities for 2010	Progress /issues	Action required for 2011
