Objective

The objective of this program is to improve food security in the Pacific region by lifting fisheries productivity and increasing the contribution of fisheries to sustainable economic development.

Australia's support of this program aligns to SPC's and the Australian aid program's broader goals for food security and sustainable economic development in the Pacific region.

- FAME's goal: "in line with the priorities of member countries and territories: the fisheries resources and the contribution of fisheries to sustainable economic development."
- The Australian aid program's aim: "To assist Pacific Island countries to increase the contribution of fisheries to sustainable economic development in the Pacific, which includes improving food security and increasing the productivity of fisheries for poor households."
- Contribute to sustainable economic development in the Pacific, which includes improving food security and increasing the productivity of fisheries for poor households.
- Contribute to increased productivity for poor households from sustainable fisheries; increased food security and improved livelihoods.
