## Development of mariculture opportunities

- [Objective](#)
- [Strategy](#)

### Objective

The objective of this component is to promote and support small and medium mariculture (saltwater aquaculture).

### Strategy

On a global basis, aquaculture is growing faster than any other form of food production and is predicted to become a major source of food and income for many developing countries.

In line with the recommendations of the 2009 AusAID-funded review of the SPC Marine Resources Division, the project component will provide advice and technical assistance with the implementation of the project component.

This project component will then provide advice and technical assistance with the implementation of the project component.

This project component has strong linkages with other initiatives, notably the ACIAR mini-projects and the SPC Marine Resources Division.
