An exciting new project for the region

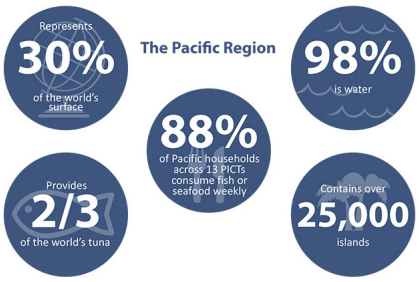

A Fisheries Science Vessel for the Pacific

A tool to manage and preserve our common resources and ecosystem

Region and needs Design Case study Missions Partners Region voices Contacts

Why do we need a Fisheries Science Vessel for the Pacific?

- Managing the sustainability of common marine resources is vital for the Pacific Island countries an
- Pacific tuna fisheries are of global importance, delivering two-thirds of the world's tuna resources, a
- The largest oceanic region must play a major role in integrated ocean/ climate initiatives.
- Satellite observations need to be complemented by in-situ scientific monitoring to understand the
- Properly designed and built for its environment and research goals, an adaptable modern sea-goin

Adaptable, connected and clean

LOA: 43m
Range:
>6,000 NM
Draft: <3.5m
Crew: 25

Adapted to the region's scale and geography

1 Efficient tuna pole and line fishing vessel — Support sustainable stock management through

2 Efficient and safe pelagic fish capture — Enhance knowledge of tuna and associated spe

3 Scientific laboratory spaces — Collect and analyse ocean ecosystem data

.

Pacific research vessel project feasibility study

The largest ocean needs a Fisheries Science Vessel to support the mo

To evaluate options for the acquisition, operation and underwriting of operational costs for an adaptab

The final report includes a detailed analysis of best vessel flag choice, appropriate management schem

Although in charge of ensuring the sustainability of over half of the world's tuna and the largest

The in-country available fisheries research vessels are limited in size and range and could only supplem

A review of regional research vessel availability and capabilities was implemented in 2019. This demo

The regional research plate-form project will fill this gap, monitoring this part of the world for the

The Pacific research vessel will have the capacity to complete many missions

Enhance the sustainability of the biggest tuna fishery

Implementing annual tuna tagging and sampling research cruises

Monitor evolution of the largest oceanic ecosystem

Implementing annual pelagic ecosystem monitoring research cruises

Monitor deep ecosystem monitoring

Preserving deep coastal resources

Monitor climate impact monitoring

Instrument deployment for Ocean Observation network

Increase country food security

Coastal FAD and open ocean aquaculture sea cage mooring deployments to increase country food sec

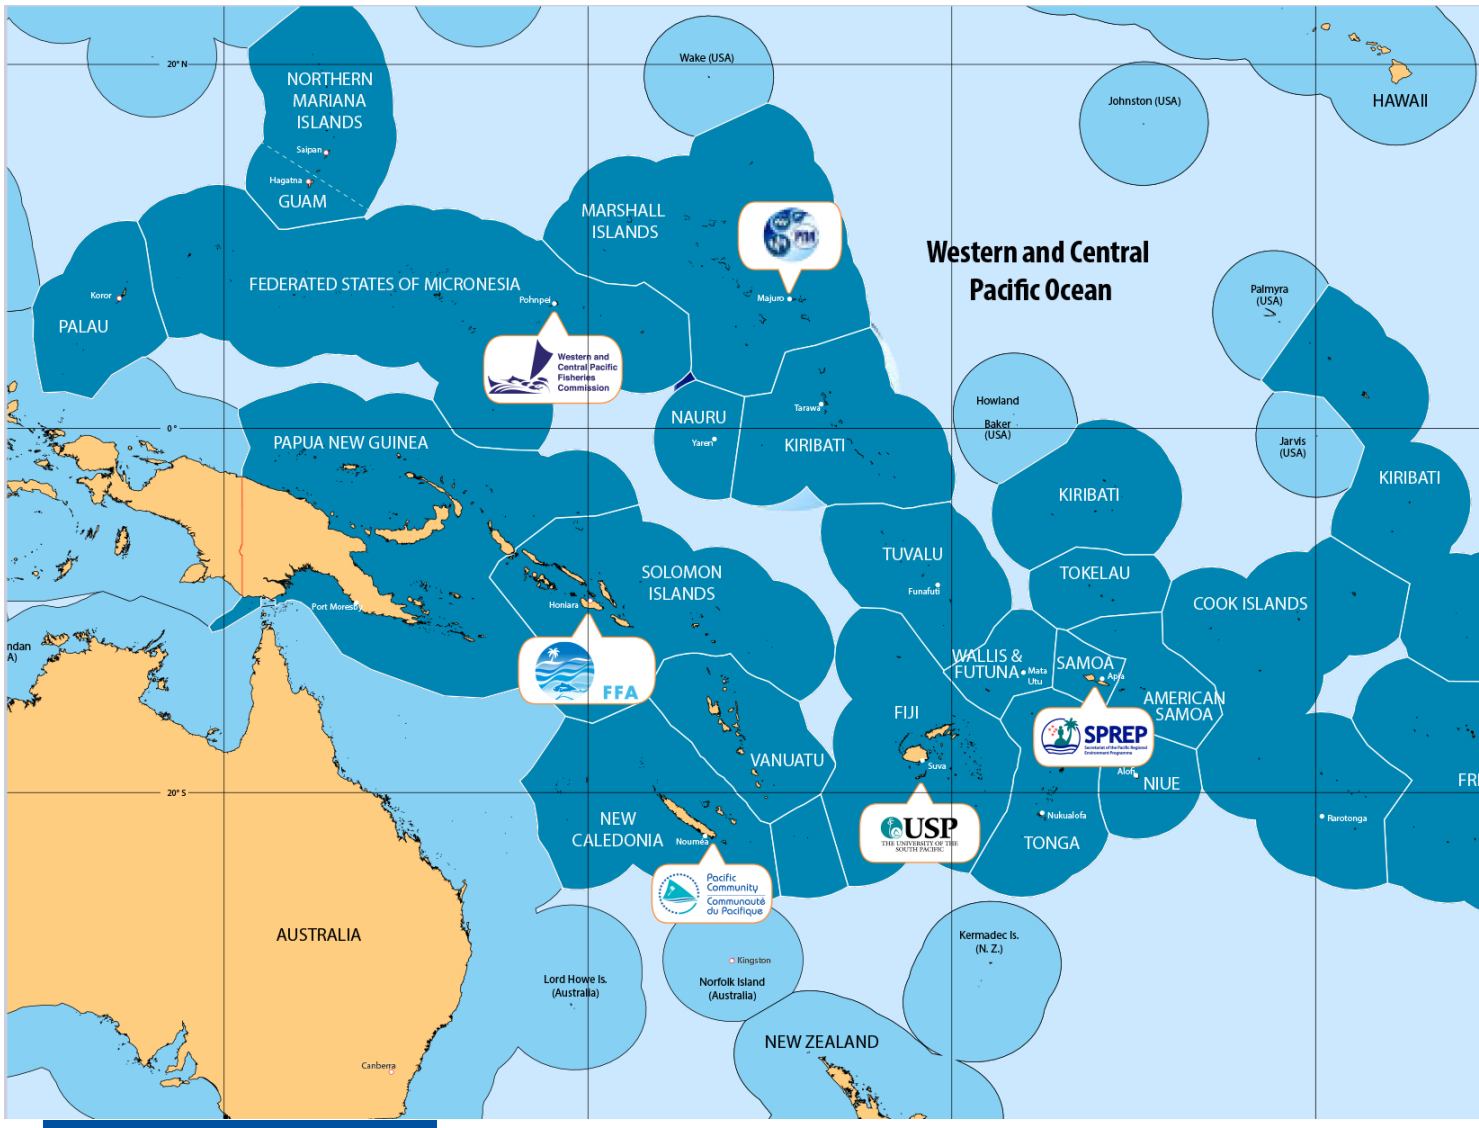

Implementing bathymetry surveys

Promote and participate to Pacific country capacity building
